Ask me anything with Mr.Simon Ren As a Co- Founder & CTO GOWITHMI May 10^Th 2019

- Question
- Answer

Question Number 1 Jaya 25 Telegram ID @Jaya25 :

- I was very proud to be able to ask the GMAT CO- Founder, --what I want to ask is how GMAT collaborates with the government on GMAT and digital map in GMAT in real life issues and cryptocurrency issues that often conflict with government regulations???
- another question I want to ask is how GMTA makes a very strong community such as the top 10 market cap coins, and how to form a natural demand for GMAT coins??
- 3.how is the system / gift-giving model on the GMAT digital map, and how to determine the size of the prize, so that consumers and investors know sir???

Answer From Mr.Simon :

- ❖ I think the final solution is let government see the value of blockchain technology, make sure blockchain are really improving people's lives
- ❖ The quick answer is, let this project really change people's lives
- ❖ yes ,can be modify be every one. For the data accuracy ,Like bitcoin, our economic system has introduced gaming. The basic idea is keep the game environment going， let the challenger get the income， If he corrects the wrong, the punishment for the perpetrator will always be greater than his potential income.

Question Number 2 AI25 Telegram ID @AI2533 :

- how to increase the confidence of prospective investors to participate in the GMAT IEO in gate io and how to improve the service system to consumers through giving coin prizes??
- how can the GMAT system on a digital map give a gift ... will this make GMAT coin supply on the market many more?

Answer From Mr.Simon :

- ❖ Later I can give you a systematic introduction of our plan after IEO
- ❖ No, the gifts are calculated to get more people involved in GoWithMi. If you want to get GMAT, you need to make real contributions

Question Number 3 MoonHunter Telegram ID @moonhunter85 :

- What's your plan to deal with privacy issue? Any personal data collected and used commercially?

Answer From Mr.Simon :

- ❖ Quick answer: no, until the technology matures, you need to take it seriously

Question Number 4 Neel!! Telegram @Neel25 :

- what's your revenue stream/model? How are you gonna earn revenue in long term in order to keep this project sustainable?
- what insures GMAT that it would work better than Google? How can you make it even comparable to google in most countries?

Answer From Mr.Simon :

- ❖ At present, we are offering customers and users another option. At least when Google map increases its price by 14 times as before (Yes, Google did raise the price 14 times last year), those small Internet enterprises will not feel desperate. so revenue is not the problem
- ❖ It should be said that the quality of map services in most countries is poor compared to China and the United States, especially when you're trying to build your own uber or something like that.

Question Number 5 Alan Telegram @atranxMVP :

- Besides the IEO, what other plans do you have to onboard or attract users to the project?
- hmm, you said it is a game on top of the map platform. How can a game make a bigger impact beside entertainment?

Answer From Mr.Simon :

- ❖ Maps are one of the top 10 apps anywhere in the world, and if we can deliver quality services, the number of users is not a problem. Waze has 20 million users in southeast Asia.
- ❖ For toC users, the buildings they have visited, the roads they have traveled, and the restaurants they have consumed can all be turned into props for them to make profits in the crowdsourcing game. They can be truly collected and contribute these data to the chain, so that the spatial geographic information data of the buildings, roads and restaurants can serve others and be rewarded. On the one hand, it is a map that you participate in and keep profiting from. On the other hand, it is a map that you own your data for free and does not belong to you. The two functions are the same, the former one will have more obvious advantages with more people participating, which one will you choose? please check this

Question Number 6 Samme Telegram @darkdragonzzz :

- Which countries does it not work in? So far everywhere I been it's worked fine... Yes I'm aware data is being monopolised and sold Does this decentralised map cost money to use??
- For the end user does it cost any money to use it? Your map
- Do you have a working product at the moment to try? And why do you need tokens for if its free to use for us users?

Answer From Mr.Simon :

- ❖ for you not (they steal your data), for uber or other company yes.
- ❖ Of course not. They make money and even buy land
- ❖ Of course, please check above. Give gifts to get more people involved. Believe me, it's worth it.

Question Number 7 Pandu Telegram @Persib26 :

- how does GMAT improve the security of the wallet system and user data system to ensure its security ... we know that in this week there was theft of BTC on one of the big exchanges hehe??

Answer From Mr.Simon :

- ❖ Quick answer, in a decentralized way. Using a decentralized wallet is by far the safest. That's what we do

Question Number 8 Amir Telegram @sunriseup :

- Can the map be altered like Wikipedia can be altered by anybody? What checks and balances are there to ensure accurate mapping? Just entered here

Answer From Mr.Simon :

- ❖ yes ,can be modify be every one. For the data accuracy ,Like bitcoin, our economic system has introduced gaming. The basic idea is keep the game environment going， let

the challenger get the income， If he corrects the wrong, the punishment for the perpetrator will always be greater than his potential income.

Question Number 9 <u>Firman Darmawansyah</u> Telegram (-) :

- the Crypto industry is difficult to predict in the future because new methods will continue to emerge. Is Gowithmi sure that the IEO is being heralded as a new future which is a solution to minimize fraud?

Answer From Mr.Simon :

- ❖ I can't provide an absolutely correct answer. But I can share with you what I'm going to do at GoWithMi to make sure that GoWithMi is going to generate value for everybody . In fact, what I want to say more is the economic logic behind it.
